

# Configuring User Workspaces

- What is a user type?
- When & why would you configure user workspaces?
- Who has permission/ability to do this?
- Where is this done in Sakai?
- Step-by-Step: How to configure a user workspace

# Properties of a user type

- Everyone who logs in is assigned ONE user type
  - registered
  - maintain
  - guest
  - [default user type – has no name]
- A user workspace template can be configured for each user type
- User logs in -> Sakai checks user's type -> Sakai creates a new workspace for the user
- User logs in -> Sakai checks user's type -> Sakai gives user some **system** permissions
- User logs in -> Sakai checks user's type -> Sakai gives user some **workspace** permissions
- An user's type can be changed. But.

## When and Why should you configure or reconfigure user workspaces?

- Upon initial implementation
- During an upgrade/when new workspace tools become available
  - Ex. replacing Profile with Profile2
- Whenever you decide you don't like them anymore
- When changes to business process require it

## Who configures workspaces?

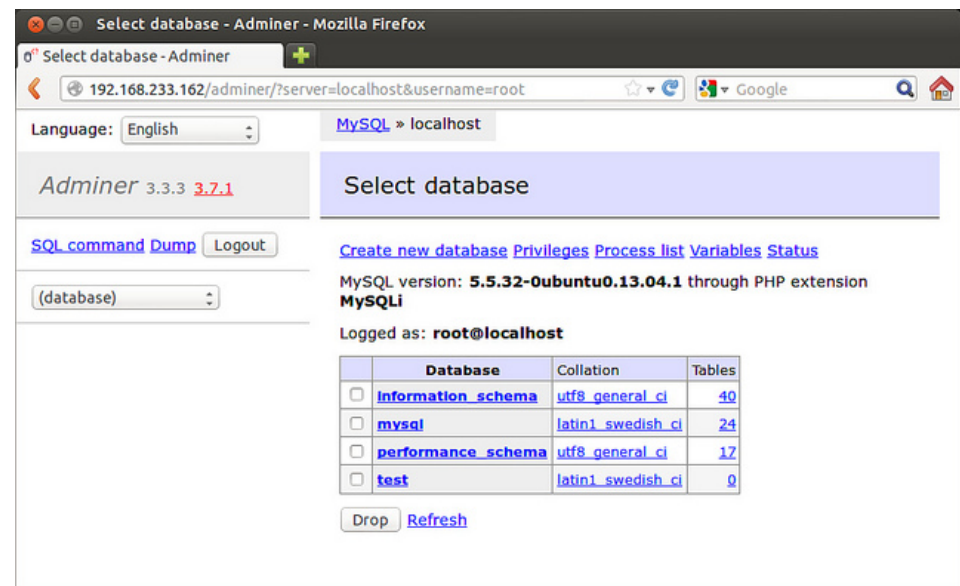

- Collaborative effort between the Sakai functional administrator and the Sakai systems administrator

# Where in Sakai do admins configure workspaces?

- Admin Workspace Sites tool
- Admin Workspace Realms tool
- In the database

## How to configure a user workspace

- Step 1: Gather your decision makers and decide on a toolset and order
- Step 2: Configure user template sites
- Step 3: Configure !user.template realms
- Step 4: Configure !user realm (optional)
- Step 5: Reorder workspace tools (optional)
- Step 6: Submit a ticket to ANI support asking them to reset your user workspaces

# What does ANI support do with your workspace reset request?

Something like this (do NOT try this at home or on Oracle):

```
delete from SAKAI_SITE_TOOL_PROPERTY where SITE_ID like '~%' and SITE_ID != '~admin';
delete from SAKAI_SITE_TOOL where SITE_ID like '~%' and SITE_ID != '~admin';
delete from SAKAI_SITE_PAGE_PROPERTY where SITE_ID like '~%' and SITE_ID != '~admin';
delete from SAKAI_SITE_PAGE where SITE_ID like '~%' and SITE_ID != '~admin';
delete from SAKAI_SITE_USER where SITE_ID like '~%' and SITE_ID != '~admin';
delete from SAKAI_SITE_GROUP_PROPERTY where SITE_ID like '~%' and SITE_ID != '~admin';
delete from SAKAI_SITE_GROUP where SITE_ID like '~%' and SITE_ID != '~admin';
delete from SAKAI_SITE_PROPERTY where SITE_ID like '~%' and SITE_ID != '~admin';
delete from SAKAI_SITE where SITE_ID like '~%' and SITE_ID != '~admin';
```

```
DELETE SAKAI_REALM_RL_FN FROM SAKAI_REALM_RL_FN INNER JOIN SAKAI_REALM ON SAKAI_REALM_RL_FN.REALM_KEY =
SAKAI_REALM.REALM_KEY AND SAKAI_REALM.REALM_ID like '/site/~%' and SAKAI_REALM.realm_id != '/site/~admin';
DELETE SAKAI_REALM_RL_GR FROM SAKAI_REALM_RL_GR INNER JOIN SAKAI_REALM ON SAKAI_REALM_RL_GR.REALM_KEY =
SAKAI_REALM.REALM_KEY AND SAKAI_REALM.REALM_ID like '/site/~%' and SAKAI_REALM.REALM_ID != '/site/~admin';
DELETE SAKAI_REALM_PROVIDER FROM SAKAI_REALM_PROVIDER INNER JOIN SAKAI_REALM ON SAKAI_REALM_PROVIDER.REALM_KEY =
SAKAI_REALM.REALM_KEY AND SAKAI_REALM.REALM_ID like '/site/~%' and SAKAI_REALM.REALM_ID != '/site/~admin';
DELETE SAKAI_REALM_ROLE_DESC FROM SAKAI_REALM_ROLE_DESC INNER JOIN SAKAI_REALM ON SAKAI_REALM_ROLE_DESC.REALM_KEY =
SAKAI_REALM.REALM_KEY AND SAKAI_REALM.REALM_ID like '/site/~%' and SAKAI_REALM.REALM_ID != '/site/~admin';
DELETE SAKAI_REALM_PROPERTY FROM SAKAI_REALM_PROPERTY inner join SAKAI_REALM on SAKAI_REALM_PROPERTY.REALM_KEY =
SAKAI_REALM.REALM_KEY and SAKAI_REALM.REALM_ID like '/site/~%' and SAKAI_REALM.REALM_ID != '/site/~admin';
```

This is Kenny. He runs the script.
