打开 eclipse

第一次使用 界面 可能是这样的

将它关掉

成为这个样子

新建个工程

一般 我们用两类工程: 一个是 java 工程 一个是 web 工程; 我们现在建的是 java 工程:

点右键

选择 new

选择 project

选择 java project

Next

输入项目的名字

Finish

提示 是否打开

Yes

Ok 项目 建成了 名字 为 test

下面建一个类

在 src 下面 点 右键

New

选 class

输入 类的名字

Name:				
	Ø 111	C 1 C 1	,	A

```
hod stubs would you like to create?

| public static void main(String[] args)|
| Constructors from superclass
| Inherited abstract methods
| and comments as configured in the properties of the current
| Generate comments
```

将 main 选择

Finish

```
public class test {
    /**
    * @param args
    */
    public static void main(String[] args) {
    //在这里 写代码
    }
}
```

点右键

```
public class test {

    /**

    * @param args

    */
    public static void main(String[] args) {

    //在这里 写代码
        System.out.println("你好");//
    }

下面是加的代码

System.out.println("你好");

怎么运行呢
```

选择 Run as

运行结果 如下

```
| Text | Series | March | Series | Description | Forthern | March | Series | Description | Descript
```

在这里 打出来字了
